Figure S3. ^1H NMR spectrum of the reaction of $[\text{V}_6\text{O}_7]^0$ with one equivalent of hydrazobenzene (Hydz) at 294 K in THF-d_8 , a- paramagnetic region showing the three peaks associated with $[\text{V}_6\text{O}_6(\text{OH}_2)]^0$, b- diamagnetic region showing the formation of azobenzene and residual hydrazobenzene. Notable in this crude reaction mixture is the lack of formation of H_2O , indicating it remains bound to the cluster.
